

Connecting
Smart Vision Lights
to
Dalsa BOA Series

Overview

Smart Vision Lights can connect directly to BOA series camera or with BOA IO Module. Section A describes connection of lights to BOA M12 Light connection. Section B describes connection of lights to BOA series using the I/O cables.

Section A – Direct Camera Connection to Light using M12 connection on BOA series

The Light cable is used to connect the BOA vision system to an external lighting device, providing power and strobe control.

CAUTION:

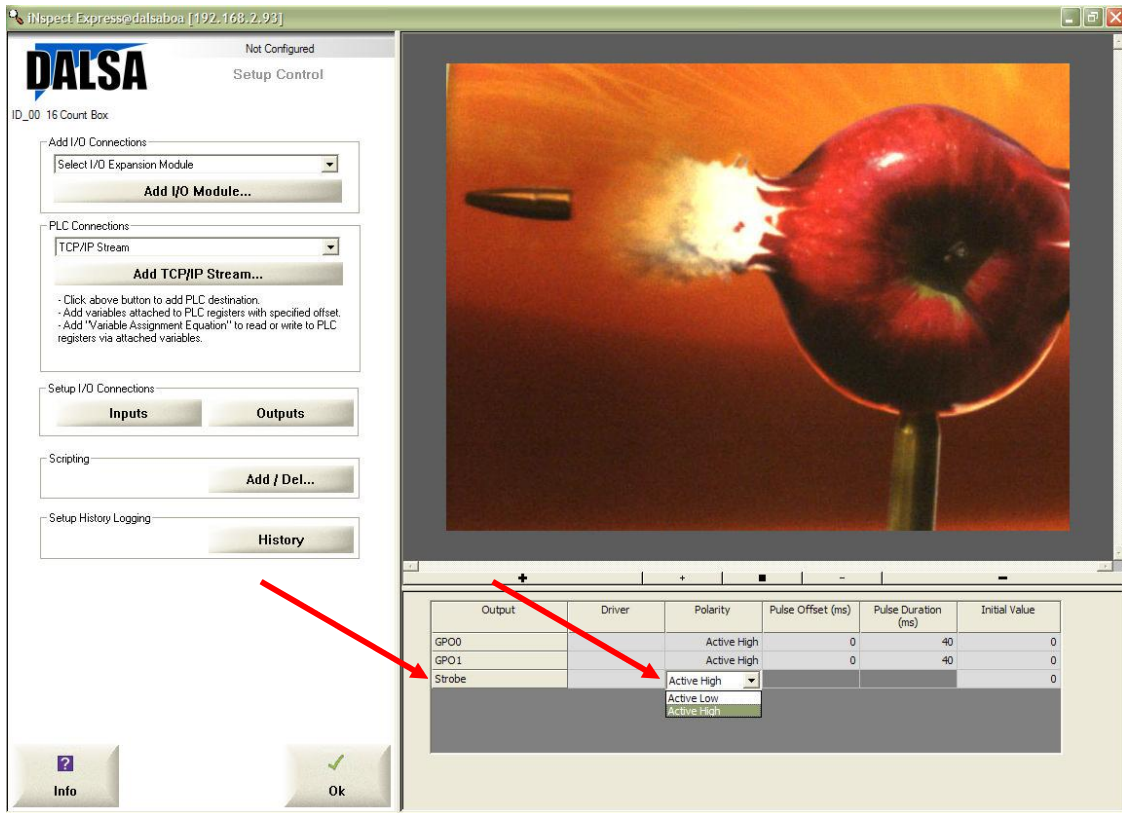

- BOA camera external lighting output is limited to 1 amp of current.
- Smart Vision Lights 5PM12-J2000-CTL must be used.
- List of lights for direct connection is available in Table 1.

Cable Diagram for 5PM12-J2000-CTL

Cables

Smart Vision Lights Cables Part Number	Length
5PM12-J300-CTL	0.3 meter
5PM12-J2000-CTL	2 meter

BOA SOFTWARE CONFIGURATION

- Under Outputs Settings...
- Set Strobe To Active HIGH

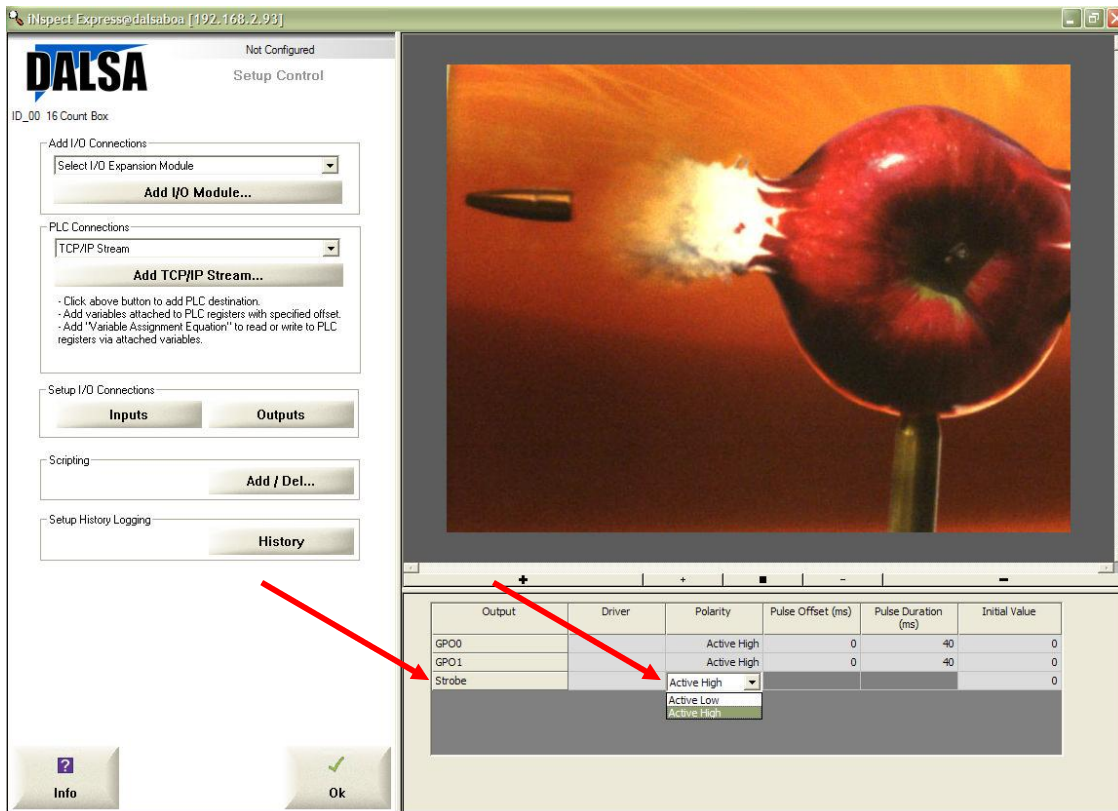

Table 1: Lights for BOA direct connection to M12 connector

Compatible Smart Vision Lights for IS7000	
Ring Lights	R80 & 130 Series
Spot Lights	S30 & SA30 Series
Spot Lights	S75 & SC75 Series
Linear Lights	L300 Series
Projector Lights	SP30 Series

Note: Lights for direct connection must not draw more than 1 amp. Contact Smart Vision Lights for additional lights that can be used with BOA Series.

Section B – Connection Camera to Light using 5 pin M12 Cable

The light cable is used connecting the BOA to an external lighting device. Light can powered directly or independently but strobed by the BOA light (Lamp) cable.

BOA SOFTWARE CONFIGURATION

- Under Outputs Settings....
- Set Strobe To Active HIGH

Camera Cable to Light Connection
